Size	Hole Size	Material	Part Number
8" x 1/2"	5/8"	Cotton	PPCB
8" x 1/2"	5/8"	Sisal	PPSB

Description	Part Number
A medium greasy, fast cutting compound suitable for buffing and coloring out the work in one operation. Our most popular grade for a large variety of work.	PP35
A very dry grade intended for use on work that has a good starting surface such as light stampings and mouldings. Can be used as a coloring compound to bring out a mirror bright luster after polishing lines have been removed using a more aggressive compound. Light green in color.	PP45
Wagner's most aggressive steel compound. Sharp abrasives produce an extra fast cutting action. Ideal for buffing out light tool marks or scratches. Its use may reduce or eliminate the need for finer belt operations.	PP47
