

# Mounting Hardware & Accessories

## Cable Grommets

Cable Grommets are offered for 1/8", 3/16" and 1/4" cable. They help prevent rust in exterior applications where moisture is a factor by providing a barrier between the cable and the painted or powder-coated surface. Ultra-tec® Cable Grommets are installed into holes in the intermediate posts and cable braces after the paint or powder coating is applied. When using Invisiware® Radius Ferrule, Push-Lock™ or Pull-Lock™ fittings, cable grommets are installed into the end post holes where the cable exits. Order cable grommets by diameter of cable and post through which the cable will be drawn.
